

Super-Loop

Checks for new Command and executes.
Takes next pointer from emptyChunk-Queue and
allocates an Object of UaDI_answer_t and pushes
this into the answerQueue.

UaDI_answer_t class contains two pointers:

- 1) Pointer to JSON-Meta-Chunk,
NULL if no new meta-data was sent
- 2) Pointer to measure-data
NULL if no new measure-data was acquired
